We need **a forward** part and a **backward** part!

single neuron:

`forward`

`backward`

```
dweights = dvalues * inputs
```

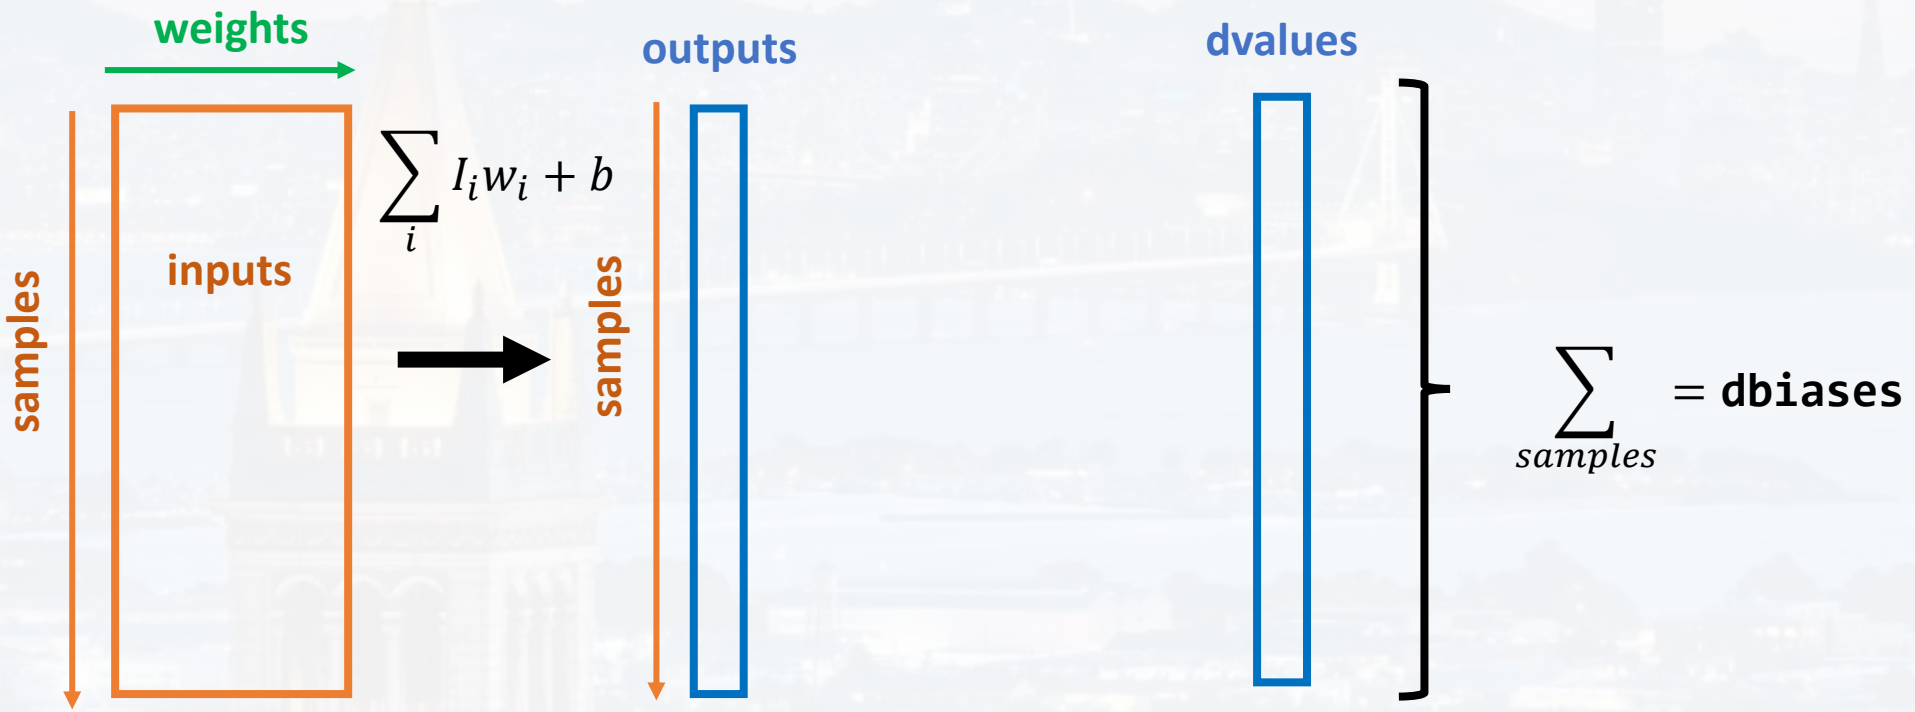

We need **a forward** part and a **backward** part!

single neuron:

`forward`

`backward`

`dbiases = dvalues`

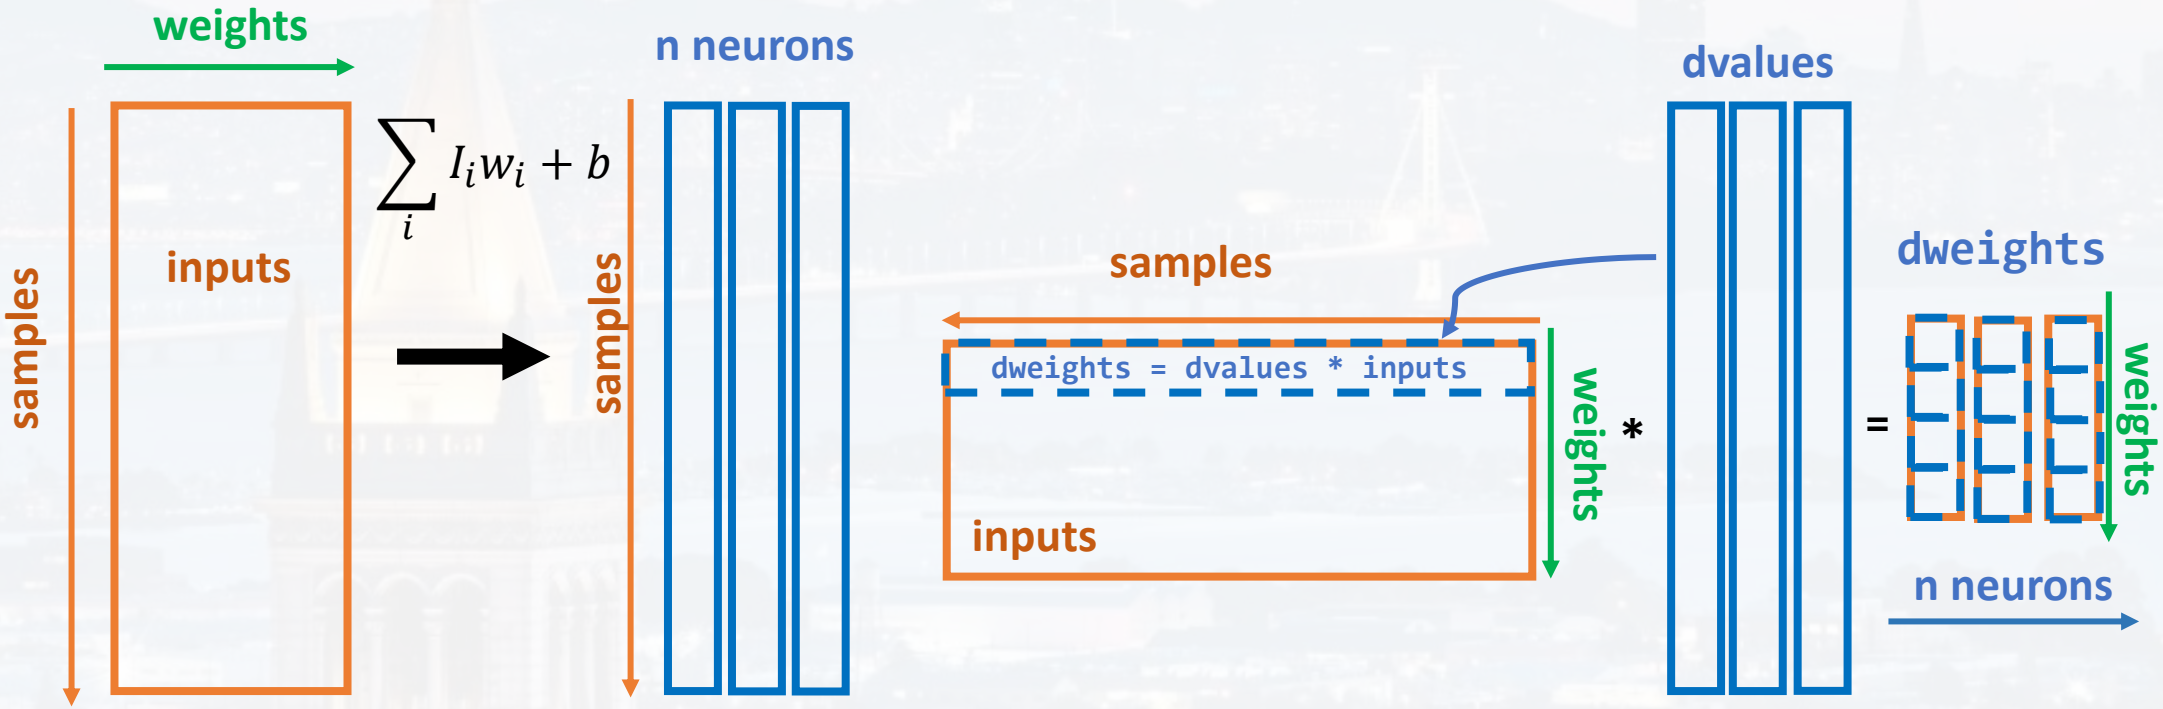

We need **a forward** part and a **backward** part!

dense layer (say **three** neurons):

`forward`

`backward`

```
dweights = dvalues * inputs
```

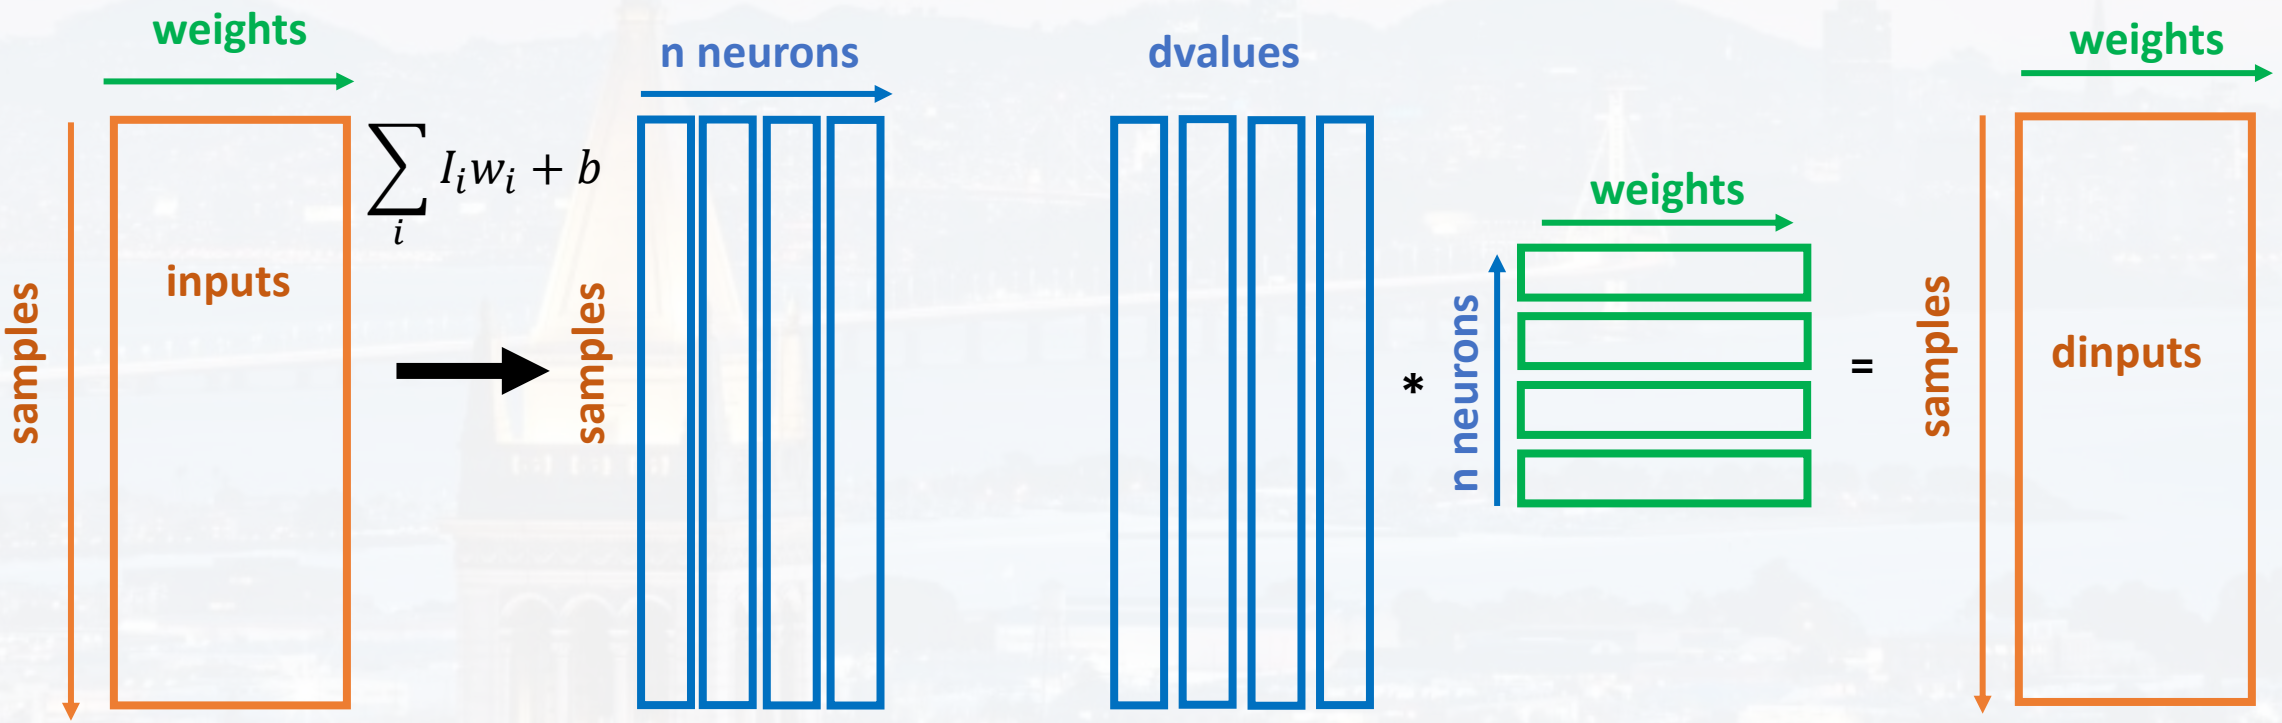

We need **a forward** part and a **backward** part!

dense layer (say **four** neurons):

`forward`

`backward`

`dinputs = dvalues * weights` (not needed for first layer!)

We need **a forward** part and a **backward** part!

dense layer (say **four** neurons):

`forward`

`backward`

`dbiases = dvalues`
